

- 1) Start USB Loader GX in channel mode and ask to display NGC and Wii games. Miss some cover/banner for some NGC games (in my case, I was adding new games to my USB drive)

- 2) Press 1 to scrape missing media

3) Wait for the scraping.

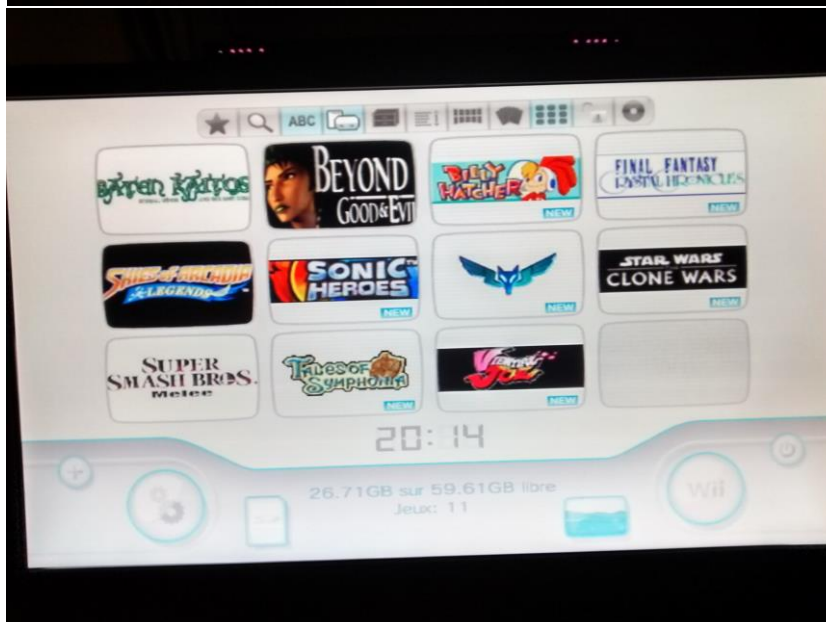

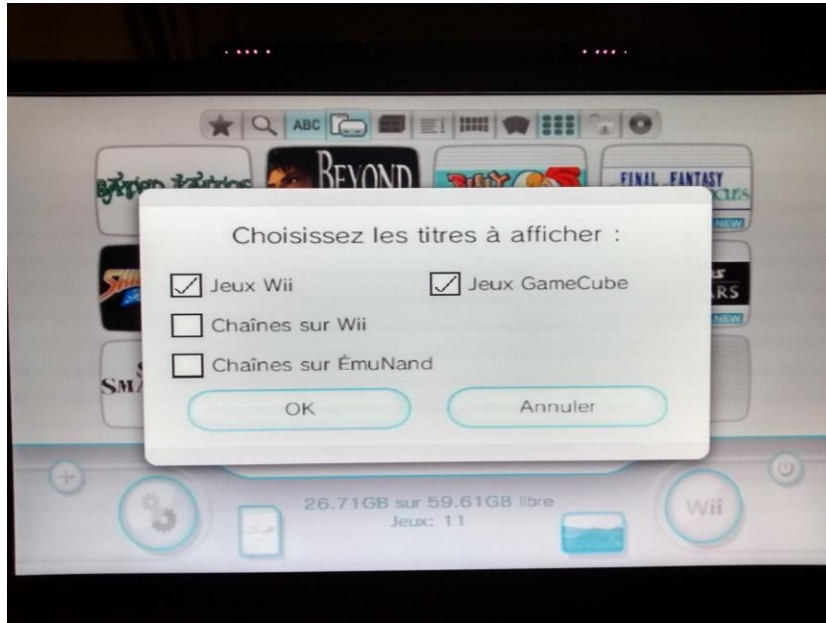

Note: here the error (missing media on the server) does not change anything. I got the bug with and without missing files.

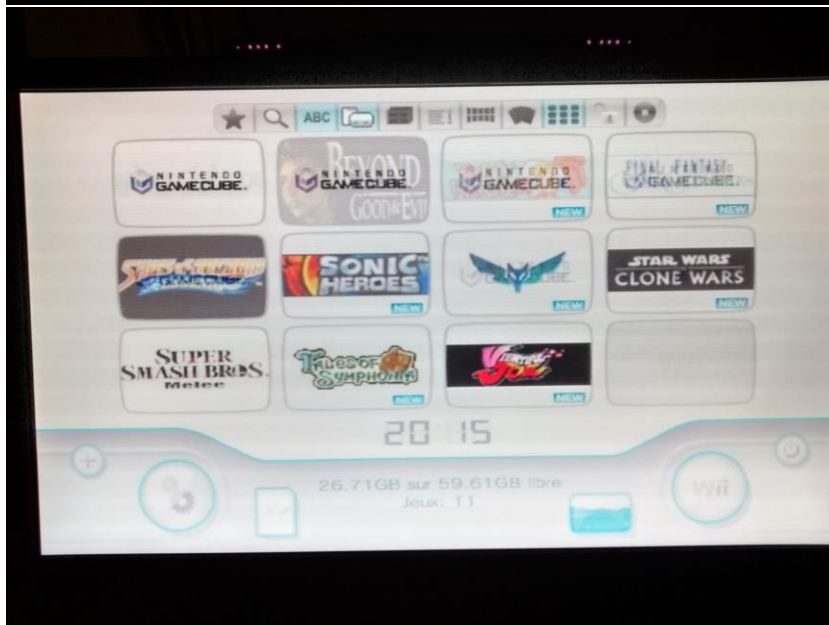

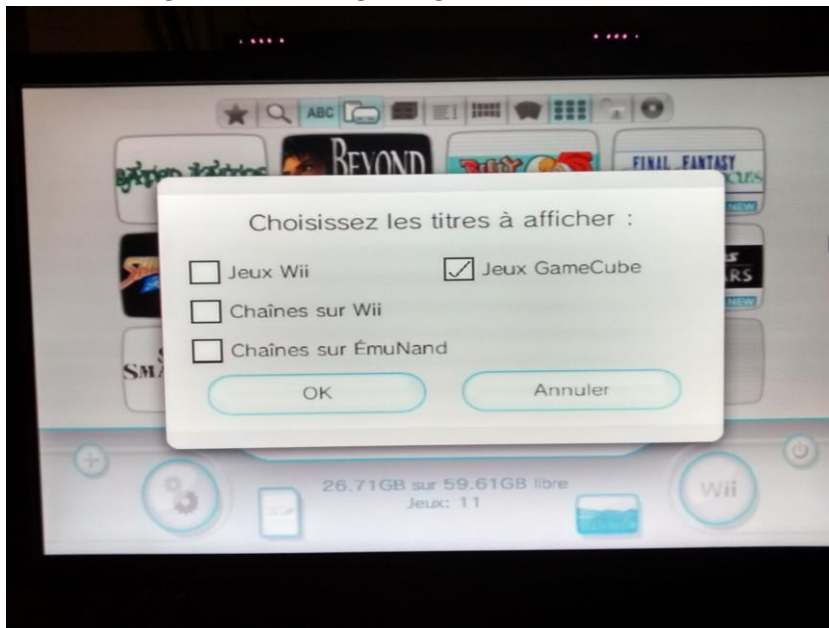

- 4) At the end of scraping, only NGC games are displayed.

- 5) Check that Wii and NGC games are selected. It is the case. Confirm. Nothing change.

6) Uncheck Wii games -> nothing change

7) Check Wii games back -> Wii games reappear
